Author and Subject Index
to the
Publications on Plant Pathology
issued by the
U. S. Department of Agriculture
up to January 1, 1925

Compiled by
Jessie M. Allen
Librarian, Bureau of Plant Industry

Washington, D. C.
Bibliographical Contributions.

No. 1. A check list of the publications of the Department of Agriculture on the subject of plant pathology, 1837-1913. Prepared in the Bureau of Plant Industry Library. 1919. (Superseded by No.8)

No. 2. Check list of publications of the state agricultural experiment stations on the subject of plant pathology, 1876-1920. Prepared in the Bureau of Plant Industry Library. 1922.

No. 3. Check list of publications issued by the Bureau of Plant Industry, United States Department of Agriculture, 1901-1920 and by the divisions and offices which combined to form this bureau, 1862-1901. Prepared in the Bureau of Plant Industry Library. 1921.

No. 5. Index to some sources of current prices. Prepared in the Bureau of Agricultural Economics Library. 1923.

No. 8. Author and subject index to the publications on plant pathology issued by the U. S. Department of Agriculture up to January 1, 1925. Prepared in the Bureau of Plant Industry Library. 1925.

INTRODUCTION

The "Check List of the Publications of the Department of Agriculture on the Subject of Plant Pathology, 1837-1918" (U.S. Department of Agriculture Library, Bibliographical Contributions No. 1), issued in 1919, is now exhausted. Instead of a reprint or new edition, it has been decided to issue this author and subject index covering the publications of the Department of Agriculture on plant pathology up to January 1, 1925, exclusive of the publications on the diseases caused by insects.

The Department of Agriculture Library maintains a complete set of the publications of the Department, and also a card catalogue of these publications as a part of the dictionary catalogue covering its large collection of scientific and technical literature. From the copy prepared for the catalogue entries for the Department and other agricultural publications, catalogue cards are printed and distributed by the Library of Congress. The Department Library catalogue is supplemented by more detailed and specific indexes of their special subjects kept by the bureau libraries. The Bureau of Plant Industry Library maintains, in cooperation with the Office of Economic and Systematic Botany of the Bureau, a comprehensive card index catalogue of botanical literature. This has one author arrangement and two separate subject arrangements, one on general botany and the other on plant pathology. Most of the subject headings used in this index are taken from the plant pathology catalogue. This catalogue was started by Miss Eunice A. Sherly, former librarian of the Bureau, and maintained by her until her death in 1921. Since that date it has been continued in charge of Miss Alice C. Atwood, Botanical Bibliographer, who is also in charge of the botanical catalogue. Miss Atwood has given much assistance in the preparation of this index.

In the author arrangement all anonymous and some ephemeral publications have been omitted. The subject index aims to give a quite complete record of the publications of the Department on plant pathology. Some appraisal has been made for subjects upon which there are many contributions, the brief and less important ones being omitted. For subjects on which there are few publications all have been included.
Some of the more recent publications entered in this index are now available for free distribution. Many of the others may be obtained by purchase from the Superintendent of Documents, Government Printing Office, Washington, D. C., but most of the early series are entirely exhausted.

The Library of the Bureau of Plant Industry is interested in establishing exchange relations with other institutions which issue publications on plant pathology and other subjects pertaining to the work of the Bureau.

Jessie M. Allen.

June 15, 1925. Librarian, Bureau of Plant Industry.
### List of Abbreviations Used for Series

<table>
<thead>
<tr>
<th>Abbreviation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exp. Sta. Rec.</td>
<td>Experiment Station Record.</td>
</tr>
</tbody>
</table>
Jour. Agr. Res. - - - - - - - Journal of Agricultural Research.

The numbers in curves following the references in the Journal are the key numbers for the separates, and the letters show the source of the contributions. The following are the key letters for the bureaus, those for the state agricultural experiment stations are the usual state abbreviations.

B - Office of Cooperative Extension.
E - Bureau of Chemistry.
F - Forest Service.
G - Bureau of Plant Industry.
K - Bureau of Entomology.
O - Federal Horticultural Board.

Mo. Weather Rev. - - - - - - Monthly Weather Review.
Month. Rep. - - - - - - - Monthly Report.
Off. Exp. Sta. Ful. - - - - - Office of Experiment Stations Bulletin.

Off. Record - - - - - - - Official Record.
Off. Sec. Circ. - - - - - Office of Secretary Circular.
Sec. Agr. Rep. - - - - - - - Secretary of Agriculture Report.
Sect. Veg. Path. Circ. - - - - Section of Vegetable Pathology Circular.
States Rel. Serv. Doc. - - - - States Relations Service Document.
1839-1860 were part of Report of Commissioner of Patents; agricultural report separate volume after 1849. From 1842 to 1870 the references to plant diseases in annual reports consisted of signed articles, translations and abstracts, letters and extracts from agricultural and horticultural society publications and farm journals. After 1870 original observations and experiments were made by various special divisions whose annual reports appeared in the annual report of the department. These divisions and bureaus were as follows:  
1871-1876. Division of Microscopy.  
1872-1889. Division of Botany. (1886 was report of mycologist; 1887-1889 report of chief of the Section of Vegetable Pathology.)  
1890-1900. Division of Vegetable Physiology and Pathology.  
1911-1923. Insecticide and Fungicide Board.  
1913-1923. Federal Horticultural Board.  

In addition to these, occasional references to plant pathology appeared in the annual reports of miscellaneous offices and divisions as follows:  
Bureau of Chemistry. 1877, 1882.  
Division of Gardens and Grounds. 1883, 1885, 1887, 1889, 1891-1893.  

Since 1894 the annual report has consisted of executive reports only, reports of investigations being made in the Yearbook and the technical series of publications.  

DEPARTMENT BULLETIN. No.1-1305. 1913-1924. In progress.  
This series, which takes the place of the numbered series of bulletins and circulars of various bureaus which were discontinued in 1913, contains popular and semitechnical results of investigations.  

DEPARTMENT CIRCULAR. No.1-338. 1913-1924. In progress.  
These circulars take the place of numerous leaflets formerly issued by the various bureaus, and being numbered in a single series avoid the former complexity of numbering.  

DEPARTMENTAL REPORT. No.1-117. 1862-1918.  
Miscellaneous material, very little on plant diseases. No.1-58, 1862-1892, were issued without numbers, a list of titles and assigned numbers appearing on cover of No.59.
FARMERS’ BULLETIN. No. 1-1445. 1883-1924. In progress.
Brief and popular bulletins on subjects of interest to farmers generally, or to the farmers in some particular locality.

A technical periodical, recording results of scientific research bearing directly or indirectly upon economic conditions of agriculture. The articles are contributed by investigators of the Department of Agriculture and of the State Agricultural Experiment Stations. The key numbers in curves following the entry (G-204, Wis.-10, etc.) show the source of the contribution. (See list of abbreviations on p. A.

Mimeographed lists of literature on special subjects, no.1-2 being check lists of department and experiment station publications on plant pathology.

Early issues contained notes on plant diseases, and the report on Microscopic investigations 1872-1876 appeared first in Monthly report, being reprinted with some changes in Annual report.

Contains occasional popular notes on plant diseases, most of which appear in more complete form in other publications of the Department.

Previous to 1894 the Annual Report contained in addition to administrative reports of the Secretary and chiefs of bureaus and divisions, discussions of the investigations of the Department. Since that date this latter material, designed to interest and instruct the farmers of the country, has appeared in a separate volume, the Yearbook.

DIVISION OF BOTANY. BULLETIN. No.1-29. 1886-1901.
Bulletins no.2,5,7-11 were contributed by the Section of Vegetable Pathology. In 1890 this section was raised to the rank of an independent Division of Vegetable Pathology with its own series of publications. The Division of Botany was merged into the Bureau of Plant Industry July 1, 1901. Contributions of the U.S. National Herbarium, vol. 1-7, which were issued by the Division of Botany, are not included in this index.

BUREAU OF CHEMISTRY. BULLETIN. No.1-186. 1883-1913.
" " " CIRCULAR. No.1-115. 1894-1913.
Division of Chemistry until July 1, 1901. These series contained occasional brief references pertaining to plant diseases, chiefly on fungicides.
BUREAU OF ENTOMOLOGY. BULLETIN. No. 1-33, n.s. no. 1-117. 1883-1913.
" " " CIRCULAR. No. 1-173. 1891-1913.
" " " INSECT LIFE. 7 vol. July 1889-July 1895.
Division of Entomology until July 1, 1904. A few of these publications were on plant pathology subjects, chiefly on control of diseases.

OFFICE OF EXPERIMENT STATIONS. BULLETIN. No. 1-236. 1889-1913.
The early bulletins, especially those which gave the Proceedings of meetings of the Association of American agricultural colleges and experiment stations, contained brief articles on plant diseases.

A technical review of the current literature of agricultural investigation throughout the world. Each number contains abstracts of literature under heading "Plant diseases".

HAWAII AGRICULTURAL EXPERIMENT STATION.
ANNUAL REPORT. 1901-1933. (Pub. 1902-1924) In progress.
BULLETIN. No. 1-54. 1901-1924. In progress.
PRESS BULLETIN. No. 1-54. 1903-1919.

PORTO RICO AGRICULTURAL EXPERIMENT STATION.
REPORT. 1900/01-1923. (Pub. 1901-1924) In progress.
BULLETIN. No. 1-30. 1902-1924.
CIRCULAR. No. 1-23. 1903-1921.
The Hawaii, Porto Rico, and other insular experiment stations under supervision of the Office of Experiment Stations, have carried on important investigations in plant pathology, the results being reported in their publications.

Farmers' Institute Lectures and Documents are popular series of the Office of Experiment Stations, with occasional numbers on plant diseases.

FEDERAL HORTICULTURAL BOARD.
NOTICE OF QUARANTINE. No. 1-57. 1912-1924. In progress.
PLANT QUARANTINE DECISION. No. 1-12. 1913-1916.
SERVICE AND REGULATORY ANNOUNCEMENTS. No. 1-81. 1914-1924. In progress.
Beginning in 1914 the decisions, notices of quarantine, regulations, etc., issued in separate form, were reprinted each month in the Service and Regulatory Announcements.

FOREST SERVICE. BULLETIN. No. 1-127. 1887-1913.
" " REPORT ON FORESTRY. 4 vol. 1878-1884.
" " UNNUMBERED PUBLICATIONS. 1907-1914.
Occasional material on plant diseases, chiefly in the unnumbered publications.
This bureau was organized July 1, 1901, by the consolidation of various divisions of the department, of which the Division of Vegetable Physiology and Pathology was one. The publications on plant pathology appeared thereafter in the bureau series of bulletins and circulars until July 1, 1913, when these bureau series were discontinued. A number of popular circulars or documents were issued from 1902 until 1918, some unnumbered and others in numbered series under the office issuing them, such as Agricultural Technology Circular, Cotton, Truck and Forage Crop Investigations Circular, etc.

 Mimeographed summaries of important data on plant diseases collected in the United States, covering such topics as prevalence, geographical distribution, severity, etc. Vol. 1-6 had title: Plant Disease Survey Bulletin.

DIVISION OF POMOLOGY. BULLETIN. No. 1-10. 1891-1901.
 Only occasional notes on plant diseases. The division was merged into Bureau of Plant Industry July 1, 1901.

 Mostly pronouncements of an administrative nature, a few on regulation of plant diseases.

DIVISION OF VEGETABLE PHYSIOLOGY AND PATHOLOGY.
 BULLETIN. No. 1-29. 1891-1901.
 CIRCULAR. No. 1-18. 1886-1901.
 July 1, 1890 the Section of Vegetable Pathology of the Division of Botany was raised to the rank of an independent Division of Vegetable Pathology, with its own series of publications. The name was changed in 1895 to Division of Vegetable Physiology and Pathology. July 1, 1901 the division was incorporated into the Bureau of Plant Industry. The bulletins of the Section of Vegetable Pathology were issued in the Division of Botany series of bulletins. The circulars of the section were No. 1-9 of the Division of Vegetable Physiology and Pathology. The Journal of Mycology, vol. 5-7, 1889-1894, issued by this section and division, is not included in this index. These volumes were only part of the periodical series, the earlier and later volumes being published outside the department.

 Contains occasional articles on weather injuries.
AUTHOR INDEX

Amoold, O.S. The effect of fertilizers on the development of stem rust in wheat. See Sphhman, E.O.

-------- The mode of inheritance of resistance to Puccinina graminis with relation to seed color in crosses between varieties of Durum Wheat. See Harrington, J.F.

-------- A study of rust resistance in a cross between Marquis and Kota wheats. See Hayes: H.K.

Adams, J.F. Parasitic fungi internal of seed corn. See Manns, T.F.

Adams, J.M.R. Sweet-potato storage-rots. See Hartor, L.L.

-------- Effects of various salts, acids, germicides, etc., upon the infectivity of the virus causing the mosaic disease of tobacco. Jour. Agr. Res. 13: 619-637. 1918. (C-149)

-------- The resistance of oat varieties to stem rust. See Mackie, W.H.

Amos, A. Plant diseases in the United States in 1907-1908. See Orton, W.A.

The U. S. Department of Agriculture Library

The Library of the U. S. Department of Agriculture consists of the main Library and the branch libraries in the various Bureaus of the Department. It is a scientific, technical and statistical library. The Library is especially strong in agriculture in all its branches, including animal husbandry and dairying, agricultural statistics, agricultural economics, veterinary medicine, chemistry, economic zoology and entomology, forestry and lumbering, botany, plant pathology, agricultural bacteriology, and meteorology. The books and periodicals in the Bureau libraries, being part of the collection of the Department Library, are included in its card catalogue except in the case of the Weather Bureau whose library of 30,000 volumes is practically independent. The catalogue contains over a half million cards and forms a most extensive bibliography of the literature of agriculture and the related sciences.

The main Library does comparatively little indexing of journals but several of the Bureau libraries keep valuable card indexes to the periodical literature pertaining to their subjects, which supplement the card catalogue of the Library. The Librarians of the Bureau libraries, being more familiar with the needs of the Bureaus and the literature of their subjects, for the most part attend to the reference and bibliographical work of the Bureaus.

The Library contains over 180,000 volumes and pamphlets. Approximately 3,000 periodicals are received currently, exclusive of serials such as annual reports, proceedings, and the like. A list of both the periodical and serial publications being received currently was issued in 1922 as U. S. Department of Agriculture circular 187. The Library's collection of local, state and national official publications of American and foreign institutions and organizations having to do with agriculture and the related sciences is probably the most complete in existence. While exchanges are received from all parts of the world, constant vigilance is necessary in order to keep the library on the mailing lists and to learn of new publications. In spite of all efforts there are many gaps in the Library's collections. The cooperation of scientific workers and of publishing institutions in building up its collections is earnestly solicited. The Library of the Department is desirous of establishing exchange relations with all institutions which issue publications pertaining to the work of the Department, and will be glad to learn of special collections and old out of print books and periodicals pertaining to agriculture or the related sciences.

The Department of Agriculture Library has no official connection with the Library of Congress but has the privilege of borrowing from that and other Washington libraries, material needed for use in the investigations of the Department. It lends to a limited extent from its own collections for purposes of research to other libraries and institutions throughout the country, especially to the various agricultural experiment stations whose work is along similar lines. While the first duty of the Library is to serve the Department, it endeavors, as the national agricultural library, to render as wide service as possible.
